

The Tags

Attach a tag to everything you wish to protect

If a tag is taken too far away from the Hub, the alarm will sound until it is returned to the zone or deactivated with the Remote. The Tag is also jam-proof - if you try and conceal or block the signal between the Tag and Hub then the alarm will also sound.

There are currently two types of Tag - **Lanyard** and **Surface**

Lanyard Tag

Our most popular tag, this features a 17cm loop which can be detached and fastened around the product you wish to protect - perfect for handbags or items of clothing.

The Lanyard Tag is sold in packs of 25 and we offer varying lengths of cables as optional accessories.

Surface Tag

The Surface tag has a small depression switch which means the tag can then be attached to the surface of product by either adhesive pad, or zip tie.

If the tag is removed from the product then the depression switch is activated even if the tag is within range of the hub.

There are a range of accessories available to make the Surface Tag even more effective and with a larger number of applications.

Security without barriers

Protect More Stock

Each Hub is supplied with 25x Lanyard Tags but if you wish to protect more products - or different types of products - then you will need extra tags.

All extra tags are sold in packs of 25 and we sell the following accessories.

Accessories

For the Lanyard style tag we sell different length cables, ranging from Extra Short to Extra Large. This enables you to loop the tag around larger - or even multiple - products.

- 12cm - Extra Short
- 17cm - Short
- 25cm - Medium
- 100cm - Large
- 200cm - Extra Large

For the Surface style tag we sell a range of accessories to help you better secure your tags to your items and we are continually innovating to make chirp compatible with even more products.
